Abstracts

Thermal cleaning systems are industrial equipment designed to remove organic residues, such as polymers, oils, waxes, and other contaminants, from metal parts, tooling, and machinery components through the application of high temperatures in a controlled, oxygen-free environment, typically using pyrolysis or combustion processes that break down contaminants into ash or gaseous byproducts without damaging the underlying substrate. These systems are widely utilized across industries requiring stringent cleanliness standards, including automotive, aerospace, plastics manufacturing, food processing, and printing, where they offer an eco-friendly alternative to chemical solvents by reducing hazardous waste, minimizing VOC emissions, and enabling the reuse of cleaned parts, thereby aligning with increasing regulatory pressures and sustainability initiatives while improving operational efficiency and lifecycle management of industrial assets.
