Abstracts

Thermal double-layer CTP plate is an offset printing plate used in the printing industry and is mainly used in digital plate making (CTP, Computer-to-Plate) technology. It has two main layers: Thermosensitive layer: Thermosensitive material responds to heat, usually by transferring image information to the plate via a laser during exposure. Laser heating causes chemical changes in the coating in specific areas, creating an image. Base layer: The material that supports the thermal layer and is used to withstand the pressure and other operations generated during the printing process. The advantages of thermal double-layer CTP plates include improved printing quality, reduced production time, reduced chemical usage, and improved production efficiency. It is widely used in commercial printing, packaging printing and other fields.

The global Thermal Double Layer CTP Plate market size was estimated at USD 1972.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
