Abstracts

Thermal evaporation coating system is a physical vapor deposition (PVD) technology equipment used to form a uniform metal or non-metal film on the surface of the substrate. The system heats the source material until it evaporates or sublimates, and then these gaseous atoms or molecules condense on the low-temperature substrate surface to form the desired functional coating. Thermal evaporation coating is widely used in optics, electronics, semiconductors and decorative coatings. With its simple and efficient characteristics, it provides materials with enhanced conductivity, reflectivity, wear resistance or other specific properties.

The global Thermal Evaporation Coating System market size was estimated at USD 963.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
