Abstracts

Thermal evaporation systems are physical vapor deposition (PVD) equipment used to deposit thin films of materials onto substrates by heating a source material in a high-vacuum environment until it evaporates or sublimates, allowing vapor particles to travel directly to the target surface and condense into a uniform coating. These systems typically consist of a vacuum chamber, evaporation sources (such as resistive boats, filaments, or crucibles), power supplies, substrate holders, and monitoring instrumentation, and they are widely employed in industries such as microelectronics, optics, solar cells, and packaging for applications including conductive layer deposition, optical coatings, and barrier films.

The global Thermal Evaporation Systems market size was estimated at USD 750.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
