Report Overview

Thermal flow meters are comprised of family of instruments for the measurement of flow of gas through closed conduits and channels. Thermal flow meter introduces heat into the flow stream and measures the dissipation using one or more than one temperature sensors. This method is best suitable for measurement of gas flow considering the variability of heat absorption rate of liquids. There are two key techniques to measure the amount of heat dissipated; however, thermal flow meters uses heat to measure the flow stream. The thermal flow meter primarily finds application in oil and gas, water and waste water treatment and chemical industries among others.

The major factor driving the growth of thermal flow meter market is due to the increasing demand for continuous emissions monitoring systems (CEMS). Continuous emission monitoring systems is used to continuously record, collect and report the required data related to emission of gasses. Increased government regulations and policies to check environment pollution is driving the demand for continuous emission monitoring systems. This is further leading to the growth of the thermal flow meter market during the forecast period. Moreover, demand for technologically advanced thermal flow meters by end user industries is paving new opportunities for various players in the market.
