Abstracts

Thermal fogger drone is a drone device with a thermal fog spraying system mounted on it, using a plant protection drone as a carrier. Its working principle is to spray a liquid mixed with water, pesticides, diesel and thermal fog penetration stabilizer at a very high speed (such as 814 meters per second) through a high-speed rotating atomizing disk or similar atomizing device, and quickly change the liquid from large particles to small particles (usually below 50 microns and above 5 microns), forming tiny droplets, achieving a 360-degree full coverage atomization effect.

The global Thermal Fogger Drone market size was estimated at USD 176.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
