Report Overview

Thermal gap fillers are materials used to fill the gaps between two surfaces to improve heat transfer and thermal conductivity. These materials are commonly made of silicone or other thermally conductive materials and are used in electronic devices such as computers, LED lighting, automotive electronics, and other applications where heat dissipation is crucial. Thermal gap fillers come in various forms such as pads, sheets, and compounds, providing flexibility in design and application. The market for thermal gap fillers is driven by the increasing demand for electronic devices with higher power densities and the need for efficient heat dissipation solutions. As electronic devices continue to become smaller and more powerful, the importance of thermal management solutions like gap fillers is expected to grow.
