Abstracts

Thermal insulating films are specialized window treatments composed of multiple layers of polyester or other polymer materials, often coated with metals, ceramics, or nano-particles, designed to reduce heat transfer, block ultraviolet (UV) and infrared (IR) radiation, and improve energy efficiency in buildings and vehicles by reflecting or absorbing solar energy while maintaining visibility. These films are engineered to address issues such as excessive heat gain, glare, and fading of interior furnishings, and they are available in various formulations?including reflective, low-emissivity (low-E), and spectrally selective types?to cater to different climatic conditions, architectural requirements, and consumer preferences for aesthetics, privacy, and performance.
