Thermal Simulation Software for Electronics is a specialized CAE (Computer-Aided Engineering) tool that models and analyzes the thermal behavior of electronic components, PCBs, and systems using numerical algorithms such as finite volume method (FVM) and finite element method (FEM). It predicts key thermal metrics including temperature distribution, heat transfer efficiency (conduction, convection, radiation), and hot spot locations under various operating conditions, enabling engineers to evaluate cooling solutions (e.g., heat sinks, fans) and optimize component layouts early in the R&D phase. By integrating with EDA/MCAD design data and offering pre-built component libraries, the software eliminates the need for excessive physical prototyping, reduces development costs, and ensures product reliability?addressing the 55% of electronic product failures caused by thermal issues and complying with the "10? rule" (system reliability drops by 50% for every 10? temperature rise) . It is widely applied in consumer electronics, automotive electronics, semiconductors, and data centers to tackle thermal challenges from high integration and power density.Market demand for Thermal Simulation Software for Electronics is driven by the proliferation of high-heat-density applications (5G devices, AI servers, EV powertrains), the advancement of Chiplet and 3D packaging technologies, and strict energy efficiency regulations. Business opportunities lie in technical innovation (integrating AI-driven fast simulation and multi-physics coupling analysis), localization (capitalizing on China?s 19%+ annual market growth and domestic substitution policy support), and deployment model optimization (promoting cloud-based SaaS platforms to lower SME access barriers) . Additionally, expanding into emerging scenarios like smart driving and green data centers, and enhancing compatibility with domestic EDA/CAD tools, further positions enterprises to capture growth in both high-end and mid-market segments.

The global Thermal Simulation Software for Electronics market size was estimated at USD 2143.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.10% during the forecast period.
