Abstracts

Thermal spray technology products are products that are heated to a molten or semi-molten state using thermal spraying technology. The materials, such as metals, alloys, ceramics, and plastics, are then atomized and sprayed onto the surface of a substrate (such as metal, ceramic, or wood) using a high-speed airflow. This creates a coating with specific functions (such as wear resistance, corrosion resistance, and high-temperature resistance). The core component is a combination of "substrate + functional coating." The price of thermal spray products varies greatly depending on factors such as product type, material, process, size, and quality requirements.

The global Thermal Spray Technology Products market size was estimated at USD 8745.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
