### Report Overview:

Thermally conductive graphite sheet is a brand-new thermal and heat-dissipating material that conducts heat evenly in two directions, shielding heat sources and components while improving the performance of consumer electronics. This new natural graphite solution features high heat dissipation efficiency, small footprint and light weight. The color is generally black, and the material is natural graphite after refined processing, and the thermal conductivity is as high as 1500W/M-K in the horizontal direction. Commonly used in IC, CPU, MOS, LED, heat sink, LCD-TV, notebook computer, communication equipment, wireless switch, DVD, handheld equipment, etc.

Graphite flakes are divided into natural graphite flakes and artificial graphite flakes:

Natural graphite heat dissipation film has high thermal conductivity, easy construction, flexibility, no gas and liquid permeability, graphite chips do not age and embrittlement, suitable for most chemical media, general thermal conductivity 700~1200W/m.k.

Artificial graphite can be made very thin, and the heat dissipation effect is very good.

The Global Thermally Conductive Graphite Sheet Market Size was estimated at USD 1032.09 million in 2023 and is projected to reach USD 1196.91 million by 2029, exhibiting a CAGR of 2.50% during the forecast period.
