Report Overview

Gap fillers are thermally conductive liquid-dispensed thermal interface materials and are often applied by meter-mixing a two-part system. When cured, the material forms a solid, but compliant interface that dissipates heat away from components, leading to an extended lifetime and higher performance. They are often used as a replacement for thermal gap pads since they achieve lower thermal impedance and offer design flexibility. They are also well suited for high-volume production of electronic components such as batteries, inverters/converters, motors, and power electronics.

The global Thermally Conductive Silicone Gap Fillers market size was estimated at USD 650.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
