Abstracts

Thermo-Expandable Microcapsules (TEMs) are tiny, encapsulated particles that expand when exposed to heat, making them useful for a variety of applications in different industries. These microcapsules contain a volatile material (often a gas or liquid) that expands when heated, causing the capsule to increase in size. The core material inside the microcapsule typically has a low boiling point, and when subjected to heat, it turns into a gas or vapor, expanding the capsule and causing a physical change in the system.

The global Thermo-Expandable Microcapsules (TEMs) market size was estimated at USD 528.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
