Abstracts

Thermo-mechanical control process (TMCP) is one of microstructural control techniques, combining controlled rolling and controlled cooling, to obtain excellent properties of steel plates, such as high strength, excellent toughness and weldability. TMCP steel finds extensive application across diverse industries such as automotive, construction, shipbuilding, and oil and gas. With the increasing need for lightweight, high-strength, and durable materials in these sectors, the demand for TMCP steel is on the rise. Infrastructure projects, including the construction of roads, bridges, dams, and buildings, require high-quality steel with superior properties. TMCP steel offers enhanced toughness, weldability, and strength, making it a preferred choice in infrastructure development initiatives around the world. The automotive industry is a significant consumer of TMCP steel. With the growing demand for lightweight vehicles to improve fuel efficiency and reduce emissions, automobile manufacturers are increasingly using high-strength TMCP steel in their designs. This trend is expected to drive the demand for TMCP steel in the automotive sector. The construction industry is witnessing a shift towards energy-efficient buildings. TMCP steel, with its excellent thermal conductivity, corrosion resistance, and high strength, is being increasingly used in the construction of green buildings and sustainable infrastructure. Manufacturers are continuously investing in research and development to enhance the properties of TMCP steel. Advanced TMCP steel grades are being developed with improved mechanical properties, corrosion resistance, and formability, catering to evolving industry needs. TMCP steel production processes often involve lower energy consumption and reduced greenhouse gas emissions compared to conventional steel manufacturing methods. As environmentally conscious practices gain prominence, the use of eco-friendly TMCP steel is anticipated to increase. The rise in electric vehicle (EV) production is another driving factor for the TMCP steel market. EV manufacturers require lightweight yet strong materials for structural components and battery casings, making TMCP steel an
