Abstracts

Thermoelectric cold plates are active cooling devices that utilize the Peltier effect to transfer heat from one side of the module to the other when an electric current is applied, effectively creating a temperature differential without the use of refrigerants or moving parts. These devices consist of thermoelectric modules integrated with a heat exchanger plate, enabling precise temperature control, rapid cooling and heating, compact design, and high reliability. They are commonly used in applications requiring localized cooling, such as in electronics (e.g., CPUs, lasers, and medical instruments), telecommunications, aerospace, and laboratory equipment, where traditional cooling methods like fans or liquid cooling may be impractical due to space constraints, noise, or maintenance issues.

The global Thermoelectric Cold Plate market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
