Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Thermoelectric Power Generator Device competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Thermoelectric Power Generator Device production reached approximately 5,173 K Units, with an average global market price of around 35.4 USD per Unit. Thermoelectric power generation technology is a new energy technology that uses the Seebeck effect of semiconductors to directly convert thermal energy into electrical energy. When a temperature difference exists between the two sides of a thermoelectric power generator device, the p- and n-type semiconductor dipole arms simultaneously drive the movement of holes and electrons, generating a potential difference at the output end. When a closed circuit is formed, a continuous DC current output is generated. Thermoelectric power generator devices feature a compact structure, no moving parts, reliable performance, maintenance-free operation, silent operation, and low carbon and environmental protection. They are widely used in aerospace, military, industrial, automotive, new energy, and consumer appliances. In the upcoming era of the Internet of Things, compact, efficient, maintenance-free, and long-life thermoelectric power generation systems are expected to provide power for many sensors and communication devices. The upstream of the Thermoelectric Power Generator Device is mainly assembled from bismuth telluride thermoelectric materials, high thermal conductivity and high insulation DBC (direct bonded copper) ceramics and high-temperature solder. From the perspective of downstream applications, Thermoelectric Power Generator Device, as an emerging renewable energy technology, has broad application prospects. As traditional energy is gradually decreasing and people's requirements for environmental protection and energy conservation are increasing, the application of thermoelectric generators TEG will become more and

more extensive. Thermoelectric power generator device upstream raw materials primarily include bismuth telluride, extruded aluminum, plastic pellets, and copper-clad substrates. Major suppliers include Furukawa, Rogers, Tong Hsing, Ortech, Shanghai Vital, ABSCO Limited, RusTec, Reade, ESPI Metals, and Vital Materials. Downstream applications include industrial, aerospace, wearable devices, and other fields. Typical customers include RTX Corporation, Lockheed Martin, and Northrop Grumman. The single-line production capacity of Thermoelectric Power Generator Device is 100,000-200,000 units, depending on the production scale, technical process and manufacturer. The product gross profit margin is between 30% and 40%.

The global Thermoelectric Power Generator Device market size was estimated at USD 202.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.30% during the forecast period.
