Report Overview

Thermomechanical analyzer (TMA) is a technique used in thermal analysis, a branch of materials science which studies the properties of materials as they change with temperature. Thermomechanical analyzer (TMA) measures changes in the dimensions of a sample as a function of time, temperature, and force in a controlled atmosphere. The force may be compression, tension, flexure, or torsion. The sample deformation can reveal information about the thermal expansion, softening, glass transition, melting, crystallization, and Others thermal events of the material.
