## Abstracts

Diaphragm valves are flow control or pressure moderation plumbing valves. They are fitted with an internal diaphragm made of resistant thermoplastic materials that can be adjusted according to application demands. The demand for thermoplastic diaphragm valves is boosted by their numerous advantages, such as chemical resistance, corrosion resistance, and high reliability. These valves are suitable for handling corrosive and abrasive materials, making them ideal for use in industries like chemical, pharmaceutical, water treatment, and food processing. Additionally, their ability to handle a wide range of temperatures and pressures, along with their long service life and low maintenance requirements, further contribute to the increasing demand for thermoplastic diaphragm valves in the market. Global key players of Thermoplastic Diaphragm Valves include Hayward Flow Control, Cepex, Asahi Yukizai, GEMU, Vinidex, etc. The top five players hold a share over 45%. Asia-Pacific is the largest market, and has a share about 34%, followed by Europe and North America with share 33% and 27%, separately. In terms of product type, PVC is the largest segment, occupied for a share of 49%. In terms of application, Heavy Chemicals has a share about 33 percent.
