Abstracts

Thermoplastic geomembranes are synthetic, impermeable barriers manufactured from thermoplastic polymers such as high-density polyethylene (HDPE), linear low-density polyethylene (LLDPE), polyvinyl chloride (PVC), and flexible polypropylene (fPP), designed primarily to control fluid or gas migration in civil, environmental, and geotechnical engineering applications. These materials are characterized by their flexibility, chemical resistance, durability, and ability to be thermally welded on-site, making them essential components in projects including landfill liners and caps, mining operations (heap leach pads and tailings dams), water and wastewater containment (reservoirs, canals, and lagoons), as well as secondary containment for industrial facilities. The market for thermoplastic geomembranes is driven by stringent environmental regulations mandating effective containment systems, increasing investments in water management infrastructure, growth in mining activities requiring secure waste and solution containment, and the expanding waste management sector due to rising urbanization and industrialization.

The global Thermoplastic Geomembrane market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
