Abstracts

TPO or thermoplastic polyolefin is a single-ply reflective roofing membrane. It is composed of polypropylene and ethylene-propylene rubber which are polymerized together to form what we call TPO. This synthetic roofing membrane comes in various thickness and dimensions. Usually, customers can find 45 to 80 mils thickness in the market. TPO is typically available in just three colors namely white, gray, and tan. If you want to achieve an energy efficient cool roof, you can go for the color white which effectively reflects the sun's energy. This also reduces the building's energy consumption as well as the urban heat island (UHI) effect. Global key players of waterproofing TPO membrane include GAF, Carlisle, Johns Manville, etc. America is the largest producer of waterproofing TPO membrane, holds a share about 50%, followed by Europe, and Asia-Pacific.

The global Thermoplastic Polyolefin (TPO) Roofing market size was estimated at USD 2856.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
