Abstracts

A thermostat and hygrostat is a device that can precisely control the temperature and humidity of the environment at the same time to keep it within a preset constant range. It is mainly composed of temperature sensors, humidity sensors, control systems, heating or cooling devices, and humidification or dehumidification devices. The temperature and humidity data of the environment are monitored in real time by sensors and fed back to the control system. The control system automatically adjusts the operation of the heating, cooling, humidification or dehumidification device according to the difference between the preset temperature and humidity values and the actual monitoring values, thereby achieving accurate and stable control of the temperature and humidity of the environment.

The global Thermostat and Hygrostat market size was estimated at USD 572.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
