Abstracts

Thickeners and Clarifiers are essential equipment used in industrial processes to separate solids from liquids, primarily in mining, wastewater treatment, chemical processing, and power generation. Thickeners focus on concentrating solid particles by settling them at the bottom of a tank, producing a denser underflow and clearer overflow. Clarifiers, on the other hand, are designed to clarify liquids by removing suspended solids to produce a clear effluent. Both systems use gravity-based settling, often enhanced with flocculants or coagulants, and are equipped with mechanisms like rakes or scrapers to manage solids. Their applications range from water recovery and sludge dewatering to wastewater treatment, offering cost-effective and efficient solutions for process optimization and environmental compliance.

The global Thickeners and Clarifiers market size was estimated at USD 335.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
