Abstracts

Thin film evaporators (TFE) are specialized thermal separation devices used to efficiently evaporate, concentrate, or distill heat-sensitive, viscous, or fouling-prone liquids by creating a thin, turbulent film of the product over a heated surface, which enhances heat transfer and reduces residence time to minimize thermal degradation. These systems are characterized by their rotating wiper blades or distributors that ensure uniform liquid distribution and high rates of evaporation, making them particularly suitable for applications requiring gentle processing, such as in the pharmaceutical, chemical, food, and environmental industries. TFEs are valued for their ability to handle challenging materials that conventional evaporators cannot process effectively, offering advantages in terms of product quality, energy efficiency, and operational flexibility.

The global Thin Film Evaporators (Tfe) market size was estimated at USD 234.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
