Report Overview

Thin film metrology systems are used to measure the film thickness accurately. A series of film layers that act as conductors, semiconductors, or bare wafers are deposited on an IC during IC fabrication. Thin film metrology systems are required during thin film deposition process to monitor and measure thin film parameters such as thickness, resistivity, and stress.

The growing demand for miniaturization and integration of semiconductors is the primary factor driving the global market for thin film metrology systems. Miniaturization of IC has been a result of high level integration to add functionalities on a single device, which is anticipated to escalate the demand for thin film metrology systems until 2023. Thin film metrology systems also help in improving the efficiency of semiconductor manufacturing processes, and as the demand for semiconductor devices escalates due to the thriving electronics industry, the market for thin film metrology systems will be benefitted. These systems are also applicable in manufacturing complex semiconductor ICs, which has led to architectures such as 3D and FinFET. This factor will further propell the thin films metrology systems demand. Conversely, demand fluctuation in semiconductor industries is the factor expected to hinder the growth rate during the forecast period.
