Abstracts

A Thin Film Piezo MEMS Foundry is a specialized semiconductor fabrication facility that develops and manufactures micro-electromechanical systems (MEMS) devices utilizing piezoelectric thin films as their core functional material. These foundries offer design, processing, packaging, and testing services for third-party clients, enabling the production of sensors, actuators, and energy harvesters that convert mechanical energy (such as pressure, vibration, or force) into electrical signals, or vice versa, through the piezoelectric effect. Key fabrication steps include the deposition of thin piezoelectric layers (e.g., aluminum nitride or lead zirconate titanate) onto substrates, precise patterning via lithography, etching, and integration with CMOS or other electronic components, resulting in miniaturized, highly responsive devices used in applications ranging from consumer electronics and medical instruments to industrial automation and automotive systems.

The global Thin Film Piezo Mems Foundry market size was estimated at USD 123.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
