## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Thiuram Disulfides competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Thiuram Disulfides production reached approximately 225 kilotons, with an average global market price of around US\$ 3,200 per ton. Thiuram disulfides are a class of organosulfur compounds characterized by the presence of a disulfide bond ( $-S-S-$ ) linking two thiuram groups. They are typically synthesized from secondary amines and carbon disulfide, followed by oxidation, and are widely used in industry as accelerators in the vulcanization of rubber, where they promote cross-linking between polymer chains to enhance elasticity, durability, and heat resistance. Beyond rubber processing, some thiuram disulfides have applications as pesticides, fungicides, and intermediates in organic synthesis, although their use is regulated due to potential toxicity and environmental persistence.

The global Thiuram Disulfides market size was estimated at USD 720.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Thiuram Disulfides market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
