Abstracts

Thoracic biomesh is a specialized mesh made from biologic materials used in thoracic surgery to reinforce and repair the chest wall, particularly after procedures such as thoracotomy or lung surgery. These meshes are typically composed of biologic materials, including collagen, and are designed to facilitate tissue healing and regeneration while minimizing complications such as infection and rejection. The growing incidence of lung cancer, thoracic aortic aneurysms, and chest wall trauma is driving the demand for thoracic biomesh products. Additionally, the increasing preference for biologic materials in thoracic surgeries that offer better healing outcomes and reduce complications is boosting the market. **Market Opportunities:** The rise in lung cancer and thoracic surgeries, especially in aging populations, presents a significant market opportunity for thoracic biomesh. The development of advanced biomaterials that improve the longevity and functionality of thoracic mesh products is another area of opportunity. **Market Challenges:** Different market access standards around the world will be a major challenge for the development of the industry. Additionally, complications related to the performance and integration of the biomesh in certain patients can pose challenges to market growth.

The global Thoracic Biomesh market size was estimated at USD 159.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
