Abstracts

Thoracic endoprostheses, commonly known as thoracic stent grafts, are medical devices designed to treat aortic pathologies such as aneurysms, dissections, and traumatic injuries by providing a minimally invasive alternative to open surgery. These endovascular devices consist of a flexible metal scaffold—typically made of nitinol or stainless steel—covered with a synthetic graft material like polyester or expanded polytetrafluoroethylene (ePTFE), which is delivered via catheter to the diseased segment of the thoracic aorta to exclude the abnormality from systemic blood flow, thereby reducing pressure and risk of rupture while promoting aortic remodeling. The global market for thoracic endoprostheses is driven by an aging population, rising prevalence of cardiovascular diseases, and increasing adoption of minimally invasive surgical techniques, with key growth regions including North America, Europe, and parts of Asia-Pacific due to advanced healthcare infrastructure and reimbursement policies. Technological advancements such as branched and fenestrated stent grafts, which allow for treatment of complex anatomies near aortic branch vessels, alongside improvements in delivery systems and imaging integration, are expanding clinical applications and patient eligibility. Major players like Medtronic, Cook Medical, Gore & Associates, and Terumo dominate the competitive landscape through extensive R&D investment, strategic acquisitions, and robust clinical data supporting long-term outcomes. However, market growth faces challenges including high device costs, stringent regulatory requirements, and the need for specialized training among vascular surgeons and interventionalists. Emerging trends such as patient-specific custom devices, bioresorbable materials, and hybrid procedures combining open and endovascular techniques are expected to further shape the market's evolution, while increasing awareness and screening programs for aortic diseases in developing economies present future growth opportunities.

The global Thoracic Endoprosthesis market size was estimated at USD 1035.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
