Abstracts

A thoracic stent graft system is a minimally invasive endovascular device designed to treat thoracic aortic aneurysms and dissections by providing internal reinforcement to the weakened aortic wall; it consists of a flexible metal stent framework, typically made of nitinol or stainless steel, covered with a synthetic graft material such as polyester or expanded polytetrafluoroethylene (ePTFE), and is delivered via catheter-based deployment to exclude the aneurysm sac from systemic blood pressure, thereby reducing the risk of rupture while preserving blood flow through the aorta. The global market for thoracic stent graft systems is characterized by steady growth, driven primarily by an aging population, rising prevalence of cardiovascular diseases, and increasing adoption of minimally invasive surgical techniques. Key market players, including Medtronic, Cook Medical, W. L. Gore & Associates, and Terumo, dominate through continuous innovation in device design, such as improved conformability, reduced delivery profiles, and enhanced sealing technologies. North America and Europe hold the largest market shares due to well-established healthcare infrastructure, high procedural volumes, and favorable reimbursement policies, while the Asia-Pacific region is emerging as the fastest-growing market, fueled by improving healthcare access, growing awareness, and expanding medical insurance coverage. Regulatory approvals, clinical evidence supporting long-term efficacy, and the trend toward physician training in endovascular techniques further shape market dynamics, though cost constraints and device-related complications remain challenges. The market is also seeing a shift toward patient-specific custom devices and the integration of imaging technologies for precise placement, reflecting broader trends in personalized medicine and intraoperative guidance.

The global Thoracic Stent Graft System market size was estimated at USD 1050.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of

7.60% during the forecast period.
