Abstracts

Thoracoscopic instruments are specialized medical devices designed for minimally invasive thoracic surgery, enabling surgeons to perform procedures such as lung biopsies, wedge resections, lobectomies, and mediastinal tumor excisions through small incisions rather than traditional open thoracotomy. These instruments typically include trocars, graspers, dissectors, scissors, needle holders, and energy-based devices like electrocautery or ultrasonic scalpels, often integrated with high-definition cameras and light sources for visualization. The primary objective is to reduce patient trauma, minimize postoperative pain, shorten hospital stays, and accelerate recovery, making them essential tools in modern thoracic surgery.

The global Thoracoscopic Instruments market size was estimated at USD 985.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
