Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Thread Forming Tap competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Thread Forming Taps are taps that form internal threads by plastic deformation rather than cutting. Unlike traditional cutting taps, they have no cutting edges and generate no chips, instead displacing material within the pre-drilled hole to shape the thread profile. This results in stronger threads with superior surface finish. Thread forming taps are ideal for ductile materials such as aluminum, brass, and stainless steel, and are commonly used in high-volume, automated manufacturing such as automotive and electronics industries.

The global Thread Forming Tap market size was estimated at USD 151.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
