Abstracts

Thread turning inserts are indexable cutting tools used in CNC lathes and turning centers for machining threads on workpieces, typically made from materials such as carbide, ceramic, or cermet, and often coated with wear-resistant layers like TiN, TiCN, or Al₂O₃ to enhance performance and durability. These inserts feature precisely ground profiles such as 60° for unified threads, 55° for Whitworth, or trapezoidal forms and are designed for external or internal threading operations, offering advantages like repeatability, reduced tool change time, and cost efficiency compared to solid tools. Available in various geometries, sizes, and grades tailored to specific materials (e.g., steel, stainless steel, cast iron) and threading standards, they play a critical role in high-precision manufacturing sectors, including automotive, aerospace, oil and gas, and general machinery, where threaded components require strict adherence to tolerances and surface finish quality.

The global Thread Turning Inserts market size was estimated at USD 235.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.35% during the forecast period.
