Abstracts

Threaded globe valves are a type of linear motion valve designed for regulating or shutting off fluid flow in a pipeline, characterized by their spherical body shape and internal disc mechanism which moves perpendicular to the flow path; they feature threaded (screwed) end connections, typically NPT (National Pipe Thread) or BSP (British Standard Pipe), allowing for direct installation into piping systems without the need for flanges, making them suitable for lower-pressure applications across industries such as plumbing, HVAC, oil and gas, water treatment, and general industrial services where precise flow control, leak-tight sealing, and ease of maintenance are prioritized.

The global Threaded Globe Valves market size was estimated at USD 3250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
