## Abstracts

The three-axis flexure stage is a high-precision positioning device consisting of three mutually perpendicular axes (X-axis, Y-axis, and Z-axis). The flexible design ensures smooth and continuous movement while ignoring the effect of friction on displacement accuracy. Its core components may include high-precision regulators, vernier micrometers (or motors, controllers, etc., depending on the drive method), guide rails, etc. These components work together to achieve precise positioning in three-dimensional space. The three-axis flexure stage has the characteristics of high precision, good stability, compactness, lightness, and modular design. It is widely used in scientific research, industrial manufacturing, biomedicine and other fields.

The global Three-Axis Flexure Stage market size was estimated at USD 62.1 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
