Report Overview

The fluxgate sensor uses a high magnetic permeability magnetic core. Under the saturation excitation of the alternating magnetic field of the excitation coil, the magnetic permeability of the magnetic core undergoes periodic saturation and non-saturation changes, causing the output of the detection coil wound on the magnetic core to communicate with the outside world. The voltage signal is proportional to the size of the magnetic field to measure the external magnetic field. The product has the advantages of small size, good linearity, wide frequency response, and low noise. It is widely used in magnetic vector measurement and total magnetic field measurement in weak magnetic field environments.
