## **Abstracts**

Three-dimensional braided composite materials are high-performance materials made of fibers woven in three directions (X, Y, Z axes). Compared with traditional two-dimensional woven materials, the three-dimensional woven structure provides higher strength, stiffness and toughness while maintaining a relatively low weight. This structural design makes this type of composite materials widely used in various fields. Combined with sensor technology, three-dimensional woven composite materials have intelligent monitoring and feedback functions, which are suitable for health monitoring and structural health management. Overall, the wide application and continuous innovative development trend of three-dimensional braided composite materials in various fields have made it a key field in the fields of advanced manufacturing and materials science.
