## Abstracts

The three-dimensional flow blower is a device used for gas transportation and compression, which is widely used in the industrial field, especially in environmental protection, sewage treatment, gas transportation, etc. Its design and working principle enable it to handle gas flow efficiently. The working principle is based on the flow of gas in a rotating impeller. The gas enters the blower through the air inlet, and under the rotation of the impeller, the gas is accelerated and compressed, and then discharged through the air outlet. The three-dimensional flow design usually refers to the flow path and flow mode of the gas in the impeller, which can effectively improve the flow efficiency and pressure of the gas.

The global Three Dimensional Flow Blower market size was estimated at USD 633.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
