## Abstracts

The three-phase aluminum shell motor is a three-phase asynchronous motor that uses aluminum alloy as the shell material. Compared with the traditional cast iron shell motor, the aluminum shell motor has the characteristics of light weight, superior heat dissipation performance, corrosion resistance, and beautiful appearance. It is widely used in industries, agriculture, construction equipment, and household appliances. Its shell is made of high-strength aluminum alloy material. After precision processing and oxidation treatment, it not only reduces the overall weight of the motor, but also improves the anti-oxidation and anti-corrosion capabilities. It is suitable for harsh environments such as high humidity and high salinity. The three-phase aluminum shell motor has a compact internal structure and runs smoothly. It is often used to drive fans, water pumps, compressors, conveying equipment, and CNC machinery, etc., to meet a variety of needs from ordinary power transmission to variable frequency speed regulation.

The global Three-Phase Aluminum Shell Motor market size was estimated at USD 6509.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
