## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Three-Phase Common Compensation Capacitor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A three-phase co-compensating capacitor is a reactive power compensation device used in three-phase AC power systems. Its three-phase capacitor units are internally connected as a single unit. By providing capacitive reactive power, it offsets the lagging reactive power generated by inductive loads, thereby improving system power factor, enhancing voltage stability, and reducing line losses. The upstream supply chain for three-phase co-compensating capacitors consists of suppliers of metallized films and insulation materials. The midstream includes technologically mature winding, potting, assembly, and testing processes, and the downstream directly supports the industrial power distribution and new energy sectors. Global annual production capacity reaches millions of units, employing a large-scale, standardized production model. Due to mature technology and fierce market competition, its gross profit margin is relatively low for power equipment, estimated to be between 15% and 25%. In 2024, production of three-phase co-compensating capacitors is expected to reach approximately 2.1 million units, with an average global market price of approximately US\$200 per unit. The three-phase common-compensation capacitor market is being driven by both rising global industrial energy efficiency standards and growing demand for renewable energy grid integration. Its prospects are deeply tied to grid loss reduction requirements and power quality optimization, placing higher demands on product reliability and intelligent switching. The European market, leveraging its stringent energy efficiency regulations and leading industrial technology, continues to define high lifespan and safety standards. The North American market,

driven by its vast demand for upgrading existing industrial equipment, maintains a steady procurement of cost-effective solutions. The Asia-Pacific market, particularly China, demonstrates the strongest growth momentum, driven by the world's largest manufacturing industry and green, low-carbon policies, and has become a core global production base and consumer market.

The global Three-Phase Common Compensation Capacitor market size was estimated at USD 426.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
