Abstracts

A three-phase current relay is an electromechanical or solid-state protection device designed for industrial and commercial electrical systems, continuously monitoring the current flow in all three phases to detect abnormalities such as overcurrent, undercurrent, phase loss, phase unbalance, or phase reversal, thereby safeguarding motors, generators, transformers, and other high-power equipment from damage due to electrical faults. These relays operate by comparing the measured current values against pre-set thresholds and triggering alarms or disconnecting the circuit via auxiliary contacts when anomalies are identified, ensuring operational reliability, minimizing downtime, and enhancing safety in applications ranging from manufacturing and energy distribution to HVAC and heavy machinery.
