Report Overview

A Three-phase Microinverter is a type of solar microinverter specifically designed to supply three-phase electric power. In a three phase system, throughout the cycle, one of the three wires has a positive (or negative) voltage, so the need for storage can be greatly reduced by transferring the output of the panel to different wires during each cycle. The reduction in energy storage significantly lowers the price and complexity of the converter hardware, as well as potentially increasing its expected lifetime.
