Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Three-Phase Oil-Immersed Transformer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Three - phase oil - immersed transformer adopts full - oil - filled seal type. The corrugated oil tank shell is a permanently sealed oil tank with its own elasticity to adapt to the expansion of oil. The core of the three-phase oil-immersed transformer is composed of a closed iron core and a winding set on an iron core column. The global three-phase oil-immersed transformer market has shown a steady growth trend in recent years, mainly driven by the upgrading of power infrastructure, the increasing demand for grid-connected renewable energy projects, and the expansion of industrial electricity consumption. With excellent heat dissipation performance, high reliability and long service life, this type of transformer occupies an important position in transmission and distribution networks, energy-intensive manufacturing industries and new energy power stations. The Asia-Pacific region has become the largest regional market due to rapid urbanization, grid transformation and new energy investment (such as China's "14th Five-Year Plan" smart grid plan and India's photovoltaic projects), while Europe and North America focus on replacing old equipment and meeting the needs of green energy transformation. The market competition landscape is polarized, with leading companies consolidating their advantages through technology integration (such as intelligent monitoring and environmentally friendly insulating oil applications), while regional manufacturers seize market segments with customized services and cost control. The key challenges facing the industry include fluctuations in raw material prices, upgrades in energy efficiency standards (such as IEC 60076 international specifications), and substitution competition from dry-type transformers, but digital transformation and power gaps in emerging economies will still create long-term growth

opportunities.

The global Three-Phase Oil-Immersed Transformer market size was estimated at USD 7322.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
