Abstracts

A three-phase soft starter is an electronic motor controller designed to gradually ramp up the voltage supplied to an induction motor during startup, reducing inrush current and mechanical stress on both the motor and connected equipment. It achieves this through controlled thyristor firing angles, allowing for smooth acceleration and deceleration without the complexity of variable speed control, making it ideal for applications where full-speed operation is required after startup but with minimized electrical and mechanical shocks.

The global Three Phase Soft Starter market size was estimated at USD 920.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
