## Abstracts

The three-piece piston can, also known as a welded-seam aerosol can, is a cylindrical container composed of three major components: a drawn or extruded body tube, a top dome (or cap) with an integrated valve mounting cup, and a bottom dome, all joined through a high-precision welding and sealing process. This design is engineered specifically for pressurized applications, commonly used for dispensing products such as paints, lubricants, insecticides, automotive products, and personal care items in aerosol form. Key structural and functional attributes include its ability to withstand internal pressure, compatibility with a wide range of propellants and product formulations, and the inclusion of a valve system for controlled dispensing. The welded construction provides strength and leak resistance while allowing for customization in height and diameter, making it adaptable to various product volumes and branding requirements.

The global Three Piece Piston Can market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
