## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Three-Temperature Translation Sorting Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The three-temperature translation sorter is an automated equipment used for testing and sorting electronic components such as integrated circuits (ICs). It can test ICs in three temperature environments: normal temperature, high temperature and low temperature to evaluate its performance at different temperatures. Industrial and automotive grade chips are often used in harsh and complex working conditions, and three-temperature tests must be carried out during their reliability assessment. As the scale of the high-end chip market expands, three-temperature test sorters are expected to become mainstream. In addition to ensuring accuracy and yield, chips also need to ensure production efficiency, and testing equipment is indispensable. Integrated circuit testing equipment mainly includes testers, sorters, and probe stations. As the requirements for testing time and space become higher, the integration of testing and sorting has become a development trend. Sorters are mainly used in chip design verification, wafer manufacturing, and finished product testing. After the test is completed, a test report is generated and fed back to the design company, manufacturer or packaging company for analysis. The translation sorter uses a robotic arm to transport chips, which is suitable for chips with large size, heavy weight, and long testing time. In terms of technical difficulty, the translation sorter has a large workload and many application scenarios, and is the most technically difficult equipment. The current application share of translation sorters on the market is the highest. At present, the market share of my country's integrated circuit special equipment industry is still mainly occupied by well-known foreign companies. Leading companies have a leading

position in the high-end market with their strong technical and brand advantages. Faced with my country's huge market demand and relatively low production costs, they have occupied most of the domestic market by establishing wholly-owned enterprises and joint ventures in my country. The important achievements made by domestic sorting equipment companies in the process of key core technologies, industrialization promotion and iterative product upgrades, including the increasingly rich types of back-end equipment such as sorting and testing, and the continuous enhancement of market competitiveness. The domestic semiconductor testing and measurement equipment market is developing rapidly, and downstream customers have urgent needs for localization of equipment. The company's customer orders continue to grow.

The global Three-Temperature Translation Sorting Machine market size was estimated at USD 1028.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
