Report Overview

The three-tooth ripper is an agricultural machine used for loosening soil, plowing, weeding and land preparation. It usually consists of three hoe-shaped iron blades with a long handle that cut through the soil and turn it up, improving soil aeration and moisture permeability. Compared with the single-tooth ripper, the three-tooth ripper can complete large-area soil loosening and land preparation faster, so it is suitable for large-scale farmland and public facilities maintenance and other fields. At the same time, the three-tooth ripper can also be used for finishing gardens and lawns, but compared with the single-tooth ripper, the price is higher, and the use and maintenance are also more complicated.
