## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Three-wire Hall Effect Switch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The three-wire Hall effect switch is a magnetic sensor based on the Hall effect. It outputs a switch signal (usually a three-wire system of power supply, ground and output) by detecting changes in the magnetic field. Its working principle is to use semiconductor materials to generate Hall voltage under the action of a magnetic field, triggering the internal comparator to achieve on-off control. Compared with mechanical switches, it has the advantages of no contact, long life (>100 million operations), vibration resistance and pollution resistance. It is widely used in position detection (such as automotive gearboxes, door and window limiters), speed measurement (motor encoders) and industrial automation.

The global Three-wire Hall Effect Switch market size was estimated at USD 820.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
