Report Overview

Thrie Beam Metal Crash Barrier is a continuous structure of three corrugated metal steel guardrails spliced with each other and supported by the main column. The soil foundation, column and beam are deformed to absorb the collision energy and force the out-of-control vehicle to return to the direction of the table. In the normal driving direction, the textile vehicle rushes out of the road to protect the vehicle and passengers and reduce the losses caused by traffic accidents.

The global Thrie Beam Metal Crash Barrier market size was estimated at USD 2560.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
