## Abstracts

Thromboelastography (TEG) is a method of testing the efficiency of blood coagulation. It is a test mainly used in surgery and anesthesiology, although increasingly used in resuscitations in Emergency Departments, intensive care units, and labor and delivery suites. More common tests of blood coagulation include prothrombin time (PT) and partial thromboplastin time (aPTT) which measure coagulation factor function, but TEG also can assess platelet function, clot strength, and fibrinolysis which these other tests cannot. Thromboelastography Analyzer provides rapid, comprehensive and accurate identification of an individual's hemostasis condition in a laboratory or point-of-care setting. Thromboelastography Analyzer is an analytical instrument used to monitor the dynamic changes of blood coagulation. It can comprehensively monitor coagulation function, reflect the function of coagulation factors, fibrin and platelets in patients, and whether there is hyperfibrinolysis. In recent years, the annual growth rate of the thromboelastography analyzer market has remained at a high level, showing the strong growth momentum of the market. This growth is mainly due to the advancement of medical technology, the increase in clinical demand and the intensification of market competition.

The global Thromboelastography Analyzer Systems market size was estimated at USD 420.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.10% during the forecast period.
