Report Overview:

Thromboelastography (Thromboelastography) is a new blood viscoelastic detection system suitable for bedside detection. It uses whole blood samples to monitor the whole process of blood coagulation and fibrinolysis, which can well make up for the deficiency of traditional blood coagulation detection.

Thromboelastogram provides a general picture of coagulation function. It is an inspection item that can dynamically monitor the whole process of coagulation and fibrinolysis. It can completely describe the whole process of a blood sample from coagulation initiation, coagulation and dissolution, and help doctors quickly judge the patient's coagulation status (high coagulation, low coagulation and fibrinolytic hyperactivity) and analyze the causes.

It is of great value in clinical evaluation of coagulation function, guidance of component transfusion, prediction of thrombosis/bleeding risk and guidance of medication.

The Global Thromboelastography (TEG) Machine Market Size was estimated at USD 298.99 million in 2023 and is projected to reach USD 629.12 million by 2029, exhibiting a CAGR of 13.20% during the forecast period.
